

6.5mL Scintillation Vial

Item# 101020

Description

This general purpose vial is ideal for liquid scintillation counting, gamma counting, chromatography, sample storage and culturing. The shoulderless vial features a full width opening of 12.5mm and the overall dimensions are 16 x 57mm. The exclusive snap and twist closures are made of high-flow polypropylene and are a true time saver.

The vials can be securely sealed by simply snapping the caps on; removal of caps requires an easy 1/4 turn. The ease with which these caps can be manipulated eliminates the danger of spillage associated with other push-on/pull-off caps. A built-in positive lock prevents the cap from popping off because of a small build-up of pressure in the vial. The quality of the sealing system is such that it is not necessary to tighten the closure with pressure to achieve a leakproof seal.

Features

- Exclusive snap and twist closures are made of high-flow polypropylene
- Cap with built-in positive lock provides secure seal

Technical Specifications

Material: Polypropylene (PP)
